

Physics Department Research Year (MPhys degree)

*The academic benchmark for what is an MPhys project is that if successful it would warrant a scientific publication like in a typical MSc level project.

*Typical financial support which is expected from the host is a PhD level stipend. Exception is EU Erasmus which is only a very partial funding mechanism, which can be combined with some level of UK Student maintenance loan. Sometimes students have their own resources.

*The department at Surrey is signing a very general (light touch) learning agreement with the host.

*Typically there is some agreement or contract between the student and host, but it is entirely up to the host to determine what is needed.

*The length of the placement should be ≥ 30 weeks. It can start and end anytime between Feb and Dec.

*Next year project should take into account the Covid related uncertainties and have some build-in remote working option.
