- Style

WTF ?!

Scientific Writing

Citation, Ethics, Plagiarism

- **Citation**

- **Why, when and how to cite**
- **LaTeX** and **BibTeX**
- **ADS**
- Dos and don'ts

- **Ethics and Plagiarism**

- **Reading:**

Eloquent Science

Chapters **12** and **15**

[*citation needed*]

Your right to know the **Authenticity!**

Plagiarism Detector

Why bother citing?

- **Literature** review (in your *Introduction*)
- Describe **development** of the field
- Distinguish **your** work from **others**
- **Credit** previously published material
- **Critique** work of others
- Convince others you are **not ignorant!**
- ***Direct quotation***
(rare in articles, common in e.g. proposals)
- Avoid **fight**s at **conferences!**

Why cite? (2)

- **To defend your ideas based on those of others**

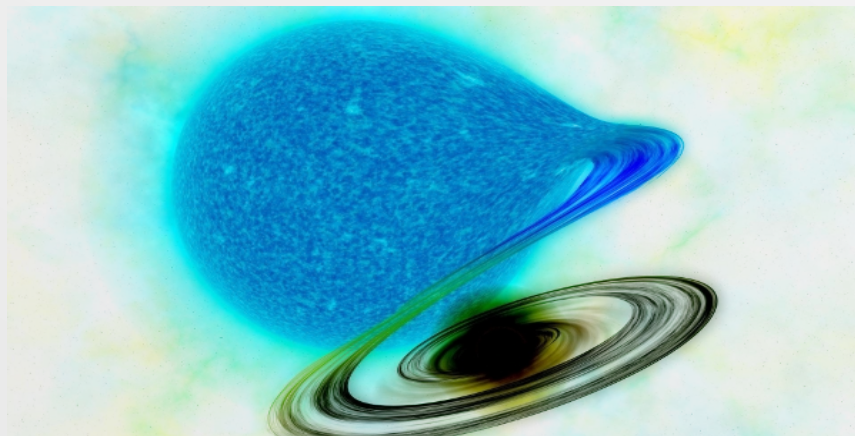

Most barium stars with $P < 500$ days are in circular orbits as predicted by tidal circularisation theory. Most of the rest of the barium stars have periods between 500 and 10^4 days.

Why cite? (2)

- To defend your ideas based on those of others

Most barium stars with $P < 500$ days are in circular orbits as predicted by tidal circularisation theory (e.g. Zahn 1977, 1989). Most of the rest of the barium stars have periods between 500 and 10^4 days (Jorissen et al. 1998).

Why cite? (3)

- You want to keep your job as Germany's *Defence Minister?*

Citation systems

- ***Author – year***

We employ the stellar code of **Izzard (2015)**.

We model stars with an approximate stellar evolution code (**Izzard 2015**).

Izzard (2015) describes our stellar evolution code.

Easy to read/edit
Flexible sentence structure

References

Izzard R.G. 2015, *Made Up Astronomy*, vol. **42**, 69

Citation systems

- **Numbered citations**

~~We employ the stellar code of Izzard (2011).~~

We model stars with an approximate stellar evolution code¹.

~~Izzard (2011) describe our stellar evolution code.~~

Shorter – easier to read?
Rigid sentence structure

References

1. Izzard R.G. 2015, *Made Up Astronomy*, vol. **42**, 69

Sentence structure

- Citations at the *end* expect where ambiguous

Most barium stars with $P < 500$ days are in circular orbits as predicted by tidal circularisation theory (Zahn 1977, 1989, Jorissen et al. 1998).

Most barium stars with $P < 500$ days are in circular orbits (Jorissen et al. 1998) as predicted by tidal circularisation theory (Zahn 1977, 1989).

- Cite in **chronological** order
- First time: if only three authors cite *in full*

Et tu syntax

- *et al.* = *et alia* “and others”
 - . is required (is *AI* the author?)
 - , after is required in *American* English

Izzard **et al.** (2011) show ...

- *e.g.* = *exempli gratia* “for example”
 - . and . are required
 - , after in *American*

Previous results on the subject are nonsense (**e.g.** Izzard 2011).

Et tu syntax

- ***Personal communication***

For an ***unpublished*** or ***informal*** citation, not an opinion or obvious fact! (Perhaps supplement with information in Acknowledgements)

- Page numbers: for citing ***part of*** a book

- Abbreviations:

Izzard et al. (2011, hereafter **I11**) show ...

... cf. ***acronyms*** ...

Tu et syntax

- Footnotes: **no no no no no!**¹
- **Initials:** *J. Smith (2010) and D. Smith (2010)*
- **Year?**

Smith (2010) showed... Smith showed...

Beware ambiguity!

- “See” ? Cut it – means the same!
The stars blew up (**see** Izzard 2011).
The stars blew up (Izzard 2011).

Tu et syntax

- *The paper of* Smith (2011) shows...
or, better, just:
Smith (2011) shows ...
- Ditto for superfluous forms:
The Smith (2011) *article* shows...
The article of Smith (2011) shows...
In his paper, Smith (2011) shows...

Direct Quotations

- Rarely directly quote sources but sometimes necessary (e.g. **review articles**)
- Interpret the quotation, context essential
- **Copyright?** ©
- You *can* edit the quotation
(... [sic] *italics for emphasis* etc.)
- Take care with **images** and **tables**
(Best to not edit an image or table!)

What to cite: what not to cite

- *Peer-reviewed* journal articles and results presented therein
- Review articles : try to cite *original* sources
- **Books**: sometimes, give pages/edition
- “**Grey**” sources: PhD theses, textbooks, biographies, conference proceedings, newspapers, *Wikipedia*, “cult” articles ... *beware* the world wide web (**URLs** change!)
(Check journal policy!)
- **Self-citation** is a plague!

Citations with LaTeX/BibTeX

- <http://www.bibtex.org/>
- Combined with LaTeX this *automates* the construction of your reference list.

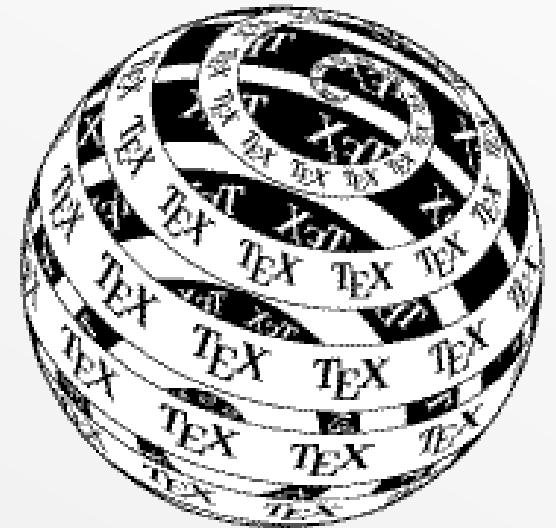

- Use *Natbib* package

- Cite commands:

`\citep` (Smith et al. 2011)

`\citet` Smith et al. (2011)

- Store your **BibTeX** references (**ADS!**) in a file
- Use **LyX** or **TeXshop** or similar software

What is ADS?

- http://esoads.eso.org/abstract_service.html
- The SAO/NASA Astrophysics Data System (**ADS**) is a *Digital Library portal for researchers in Astronomy and Physics*, operated by the Smithsonian Astrophysical Observatory (SAO) under a **NASA** grant.
- The **ADS** maintains three bibliographic databases containing 11,244,794 records (as of 5th January 2015, adswww.harvard.edu/ads_abstracts.html):
Astronomy and Astrophysics, Physics, and **arXiv** e-prints.

Journal Year/Volume/Page

[SAO/NASA ADS Astronomy Abstract Service](#) Journal/Volume/Page Query Form

This page allows you to find articles from journal references by year, journal, volume, and/or page. Each of the fields is optional. The query will return all references that match the input parameters.

[Journal Name/Code](#):

Year: Volume: Page:

Retrieve abstracts starting with number

Send Query

Clear

The entries in these fields can contain wildcard characters ('?'). For instance 2??1 in the page field finds pages 2001, 2011, 2101, etc. The Journal Codes are available in the [List of Bibliographic Code Abbreviations](#). Each field is optional. If any field is not specified, all matching references will be returned.

ADS help pages

- There are many more features:
- **Targetted** (filtered) **emails**
- **Title/keyword searches**
- Links to data (**CDS**) and **SIMBAD**
- Help manual:
http://esoads.eso.org/abs_doc/help_pages/adshelp.pdf
- Online:
http://esoads.eso.org/abs_doc/help_pages/

Wikipedia and The Web

- Great tools... but they are in the “grey” area
- Wikipedia usually has a *References* section
- Cite the *original* source of the information!

References

mie

Ethics

- Do not steal, *cite*
- But also be good to your colleagues

Ethics: Definitions

- Fabrication: **making up** data/results
- Falsification: **manipulating** results and presenting them inaccurately
- Plagiarism: **stealing** ideas/results without giving appropriate credit

(does not include *disagreement/mistakes*)

National Science Foundation

<https://www.nsf.gov/oig/misconscieng.jsp>

See also *Eloquent Science* Ch.15, pp. 184

Plagiarism

Where do you draw the line?

1. Copying a paragraph verbatim from a source without any acknowledgement
2. Copying a paragraph and making small changes
3. Cutting and pasting a paragraph by using sentences of the original but omitting one or two
4. Composing a paragraph by taking short phrases from a number of sources and putting them together
5. Paraphrasing a paragraph by rewriting with substantial changes in language and organisation
6. Quoting a paragraph by placing it in block format with the source cited in text & bibliography

Based on *Academic Writing for Graduate Students*
by Swales and Feak (University of Michigan, 1993)

Avoid stealing

- Write about **your** ideas
- Build on others' ideas with citations
- **Never copy** text verbatim
(until putting the final text together)
- Always **quote and cite** together
- Separate **your contribution** from the cited source
e.g.

Smith et al. (2011) claim “the Universe is flat” but we find it is curved.

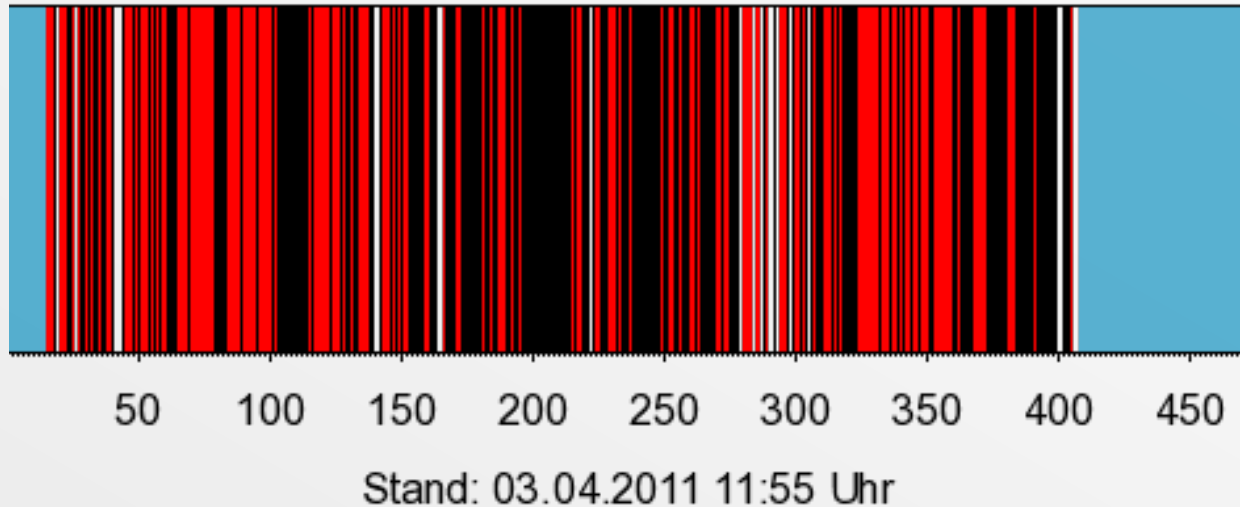

Self-Plagiarism

- You can steal from yourself!
- **Duplicate publication**
e.g. submitting an article to two journals at the same time!
- **Recycling** of your text: might be acceptable
- Copyright!
- <http://www.plagiarismtoday.com>

zu Googleberg

1218 Plagiatsfragmente aus 135 Quellen
auf 371 von 393 Seiten (94.4%)
in 10421 plagiierten Zeilen (63.8%)

**Assume
you will
be
caught**

- black = plagiarized from one source
- red = plagiarized from several sources
- white = no plagiarism found
- blue = table of contents and appendices

http://de.guttenplag.wikia.com/wiki/GuttenPlag_Wiki/English

A final word on citation

- Read the articles you cite . . .

Course (so far) Discussion

- Soon we will head into the *English Language* section: a bit dull but useful!
- How is it going for you?
- What more would you like to see?
